

IDENTIFICATION OF THE GENE ENCODING
NOVEL α -GLUCOSYL TRANSFER ENZYME AND
ITS APPLICATION TO PRODUCTION OF
VALUABLE α -GLUCOSIDES

February, 2003

Toshiyuki Sato

Contents

Preface

Chapter 1	Reviews: Enzymatic Synthesis of -Glucosides Using Various Enzymes	1
1.1	Introduction	1
1.2	Enzymatic synthesis of glucosides	2
1.2.1	Neohesperidin -glucoside synthesis using cyclodextrin glucanotransferase of <i>Bacillus</i> sp. A2-5a	2
1.2.2	UDP-glucose synthesis using sucrose synthase of rice	4
1.2.3	6-Benzyloxyhexyl- - <i>N</i> -acetylglucosaminide synthesis using - <i>N</i> -acetylhexosaminidase of <i>Penicillium oxalicum</i>	6
1.3	Xanthan gum synthesis by <i>Xanthomonas campestris</i>	8
1.3.1	Properties of xanthan gum	8
1.3.2	Biochemistry of xanthan synthesis	8
1.3.3	Genetics of xanthan synthesis	10
1.4	The objective of this thesis	14
1.5	References	15
Chapter 2	Materials and methods.	24
2.1	Introduction	24
2.2	<i>X. campestris</i> WU-9701	24
2.3	<i>Escherichia coli</i>	24
2.4	Media, cultivation and strain maintenance of <i>X. campestris</i> WU-9701	25
2.4.1	Cultivation for <i>Escherichia coli</i>	25
2.4.2	Strain maintenance of <i>X. campestris</i> WU-9701	27

2.5	Media, cultivation and strain maintenance of <i>Escherichia coli</i>	27
2.5.1	Media for <i>E. coli</i>	27
2.5.2	Cultivation of <i>E. coli</i>	28
2.5.3	Strain maintenance of <i>E. coli</i>	28
2.6	DNA extraction	30
2.6.1	Total DNA extraction from <i>X. campestris</i> WU-9701	30
2.6.2	Plasmid DNA extraction from <i>E. coli</i>	30
2.6.3	Agarose gel electrophoresis	31
2.6.4	DNA recovery from agarose gel	31
2.7	Construction of a partial DNA library of <i>X. campestris</i> WU-9701	31
2.8	Transformation of <i>E. coli</i>	32
2.9	Gene cloning	32
2.9.1	Oligonucleotide synthesis	32
2.9.2	PCR (Polymerase chain reaction)	33
2.9.3	Colony hybridization	33
2.10	DNA sequencing	34
2.11	Southern hybridization	35
2.11.1	Southern transfer	35
2.11.2	Hybridization and detection	35
2.12	Analytical methods	36
2.12.1	Measurement of -glucosides	36
2.12.2	Spectrophotometric measurement	36
2.12.3	Measurement of enzyme activities	37
2.12.4	Measurement of protein concentration	37
2.12.5	Thin-layer-chromathography (TLC)	38
2.12.6	NMR analysis	38
2.13	References	38

**Chapter 3 -Anomer-Selective Glucosylation of (+)-Catechin
by the Crude Enzyme of *Xanthomonas campestris*
WU-9701** **40**

3.1	Introduction	40
3.2	Materials and methods	42
3.2.1	Materials	42
3.2.2	Preparation of enzyme	42
3.2.3	Preparation of (+)-catechin glucoside	43
3.2.4	Purification of catechin glucoside	44
3.2.5	Thin-layer-chromathography (TLC)	44
3.2.6	High-performance liquid chromatography (HPLC)	45
3.2.7	NMR analysis	45
3.3	Results	46
3.3.1	Preparation and isolation of -C-G	46
3.3.2	Optimization of -C-G synthesis	48
3.3.3	Properties of -C-G	54
3.4	Discussion	55
3.5	References	57

**Chapter 4 Enzymatic Synthesis of -Arbutin by -Anomer-
Selective Glucosylation of Hydroquinone Using
Lyophilized Cells of *Xanthomonas campestris*
WU-9701** **60**

4.1	Introduction	60
4.2	Materials and methods	61
4.2.1	Materials	61
4.2.2	Preparation of lyophilized cells of <i>X. campestris</i> WU-9701	62
4.2.3	Preparation of -arbutin	62
4.2.4	Purification of hydroquinone glucoside	62

4.2.5	Thin-layer-chromathography (TLC)	63
4.2.6	High-performance liquid chromatography (HPLC)	63
4.2.7	NMR analysis	64
4.3	Results	64
4.3.1	Preparation and isolation of α -arbutin	64
4.3.2	Optimization of α -arbutin synthesis	69
4.4	Discussion	71
4.5	References	73

Chapter 5 Purification and Characterization of a Novel -Glucosyl Transfer Enzyme from *Xanthomonas campestris* WU-9701

		76
5.1	Introduction	76
5.2	Materials and methods	77
5.2.1	Strains and materials	77
5.2.2	Enzyme assay	77
5.2.3	Purification of α -glucosyl transfer enzyme	78
5.2.4	Characterization of the purified enzyme	80
5.2.5	Other analytical methods	80
5.3	Results	81
5.3.1	Purification of the α -glucosyl transfer enzyme	81
5.3.2	Effects of various reagents	83
5.3.3	Substrate specificity	84
5.3.4	Kinetic properties	87
5.3.5	Maltose-hydrolyzing and glucose transfer activity	88
5.4	Discussion	90
5.5	References	92

Chapter 6 Gene Cloning and Molecular Characterization of a Novel α -Glucosyl Transfer Enzyme from *Xanthomonas campestris* WU-9701 **94**

6.1	Introduction	94
6.2	Materials and methods	94
6.2.1	Strains and plasmids	94
6.2.2	Enzyme assay	95
6.2.3	Amplification by the polymerase chain reaction (PCR)	96
6.2.4	Construction of a partial DNA library of <i>X. campestris</i> WU-9701 and screening	97
6.2.5	Sequencing of the nucleotides	97
6.3	Results	98
6.3.1	Cloning of the gene (<i>xgtA</i>) encoding an α -glucosyl transfer enzyme of <i>X. campestris</i> WU-9701	98
6.3.2	Nucleotide sequence and identification of <i>xgtA</i>	100
6.3.3	Putative secondary structure and putative stereo structure of XgtA	106
6.4	Discussion	107
6.5	References	111

Chapter 7 Expression of the Gene Encoding a Novel α -Glucosyl Transfer Enzyme of *Xanthomonas campestris* WU-9701 and Its Application to α -Anomer-Selective Glucosylation of Menthol **113**

7.1	Introduction	113
7.2	Materials and methods	113
7.2.1	Strains and plasmids	113
7.2.2	Expression of the α -glucosyl transfer enzyme gene (<i>xgtA</i>) in <i>E. coli</i> JM109	114

7.2.3	Enzyme assay	114
7.2.4	α -MenG synthesis by the recombinant enzyme of <i>E. coli</i> JM109/pKKGTF	115
7.2.5	Enzymatic synthesis of α -arbutin by α -anomer-selective glucosylation of hydroquinone using the recombinant enzyme of <i>E. coli</i> JM109/pKKGTF	116
7.2.6	Other analytical methods	117
7.3	Results	117
7.3.1	Expression of <i>xgtA</i> in <i>E. coli</i> and enzyme assay	117
7.3.2	Application of the recombinant enzyme to α -anomer-selective glucosylation of <i>l</i> -menthol	121
7.3.3	Application of the recombinant enzyme to enzymatic synthesis of α -arbutin by α -anomer-selective glucosylation of hydroquinone	123
7.4	Discussion	125
7.5	References	127
Chapter 8 Summary and conclusions		128
