Chief Examiner: Lim Hua Sing
Deputy Examiner: Umezü Hiroyoshi
 Examiner: Kobayashi Hideo
 Examiner: Liu Shinkei
# Table of Contents for Doctoral Dissertation

Alan Partee

## List of Tables Used in this Dissertation

### Introduction

A. Research Synopsis

B. IT Hardware Industry Overview 4

C. Central Issues of Doctoral Research 8

D. List of Working Definitions and Technical Terminology 10

E. List of Acronyms 18

F. Overview of the Doctoral Dissertation and Analytic Framework 23

## PART I. Analytic Survey of the Literature on East Asian Development and Institutions 28

### Introduction to Part I 28

#### Section 1.1 The Organization of the IT Hardware Industry in Taiwan and Japan 30

1.11 How to Organize? 30

1.12 The State in Taiwan & Japan 37

#### Section 1.2 Some Different Theories on East Asian Development Concerning Taiwan and Japan 39

1.21 The Theoretical Camps 39

1.22 Statist Approaches 43

1.23 Anti-statist Approaches 53

1.24 Recent Revisionist Arguments 58

1.25 Politics and Flexible Production Strategy Argument 63

Global Division of Labor and Production Network Arguments 64

#### Section 1.3 Toward a New Comparative Approach: Comparative Institutional Analysis 66

1.31 Towards Understanding CIA 66

1.32 Foundations of Comparative Institutional Analysis 76

#### Section 1.4 Diversity and Mobility of Human Resource Networking 81

1.41 Accelerated Catch-up for ICs 81

1.42 Theory and Propositions 83

#### Section 1.5 Case Study -- Integrated Silicone Solutions Networks in Silicon Valley: the Global Diversity of Human Resources 85

Conclusion Part I: Comparative Institutional Analysis as a Diversity Strategy 92
Part II. Political Intervention: Analysis of Organizational Strategies for State Institutions Related to IT

Introduction to Part II

Section 2.1 Institutional History of Taiwan’s New Paradigm for Rapid IT Development

2.11 Taiwan Makes Some Big Moves
2.12 Stage 1: Start of IC Assembly (1965-73)
2.13 Stage 2: Establishing UMC, STAG, & Hsinchu Science Based Industrial Park (1979-83)
2.14 Stage 3 VLSI Project and the Creation of TSMC (1984-88)
2.15 Stage 4: The Submicron Project and the Growth of Privatization (1989 TO 1997)

Section 2.2 The Role of the State

2.21 Taiwan Style Intervention

Section 2.3 Leadership, Politics and IT Policy in Japan

2.31 Intervention Japanese Style
2.32 Japan and the PC Revolution
2.33 History of Japan’s PC Industry
2.34 Global Competitiveness

Failures in Soft Wars
Japan’s Hardware Gets Softer
U.S. Standards Make Japan Reliant
Industry Structure for Software

2.35 Domestic Market: Slow Adoption of Information Technology

Human Resources

Conclusion Part II

Part III. Bureaucracy and NGOs in IT Industries: ITRI & MITI

Introduction: Japan’s Bureau Pluralism & Taiwan’s Open Pluralism

Section 3.1 Diversity of Institutions: NGOs & NPOs & IPOs

3.11 The General Definition of NGO, NPO and The Triangle Method
3.12 The Role NPOs and NGOs in Japan’s Economy and IT Hardware Industry

Section 3.2 The Case Study for ITRI and ERSO (1974-78)

Details of ITRI’s Incubator and Organization
The Role of NPO’s Spun Off From State Agencies

Section 3.3 Bureaucracy and Open Pluralism in Taiwan’s IT Success

3.31 The National Science Council and National S&T Conferences
3.32 The Ministry of Economic Affairs
3.33 Other Ministries and Their OSTAs
The Science and Technology Advisory Group
Part IV. Background and Analysis of Corporate Organizational Strategies for the IT Businesses with Case Studies 197

Section 4.1 Vertical Division of Labor: Strategies for Taiwan’s IT Hardware Industry 199

4.11 Dividing the Labor 199

The Division of Labor of the Win-Win OEM Strategy (苗豐強 1997) Has Given Birth to a Globally Competitive IC Industry in Taiwan 200

4.12 Key Points on Taiwan’s Unique Vertical Division of Labor for IT Hardware 202

Section 4.2 Industry Case Study A: Taiwan’s IC Foundries and Fabless ICs 206

4.21 Specialization, Integration, and Global Competency are Major Factors Contributing to the Competitiveness of Taiwan’s IC Industry 206

4.22 Taiwan’s Human Resource Competitiveness is Helped by its Unique Stock Bonus System 210

4.23 The Benefits of Taiwan’s Stock Bonus System 213

4.24 Taiwan’s IC Industry Corporations Sustaining Development 216

Developing Long-term Strategies 217

How Can Taiwan’s IC Industry Continue to Develop? 217

Going with the Trends 218

Independent Technology Development 223

4.25 Introduction to Company Case Studies 224

Case Study 1: UMC United Micro Electronics 226

Case Study 2: Taiwan Semiconductor Manufacturing Company (TSMC) 240

Case Study 3: Winbond Electronics Corporation 255

Case Study 4: Weltrend Semiconductor Incorporated 270

Case Study 5: Macronix International Company 277
Case Study 6: Mosel Vitelic Inc. 287
Case Study 7: TI·Acer (Texas Instruments – Acer Joint Venture) 296

Section 4.3 Industry Case Study B: Taiwan OEM Notebook Computers 303
   4.31 OEM Hub Becomes ODM Hub: Taiwan Flourishing from Notebook Production
   4.32 More Value-Added: Logistics and Support 306
   4.33 China: Early Stages of ODM Relationships 312
   4.34 Gateways to Diversification: Server Outsourcing 316

Case Study 8: Compal Electronics OEM Notebooks – Current Trends 319
Case Study 9: Quanta Computer 329
Case Study 10: Mitac International Corporation 338
Case Study 11: First International Computer Incorporated 344
Case Study 12: Inventec Corporation 351

Case Study 13: Hon Hai Precision Industry Company 357

Conclusion Part IV 364

Part V. For and Against Taiwan: Confronting Criticisms and Revealing Success 366

Introduction Part V 366
Section 5.1: Some Common Criticisms of Taiwan’s System 368
Section 5.2: Ethnic Chinese Economies’ Criticisms by Cultural Theory, Conventional Wisdom and Anti-familism 371
Section 5.3 Familism and Patrimony Can be Stewardship and Leadership 375
Section 5.4 Productivity of Taiwan’s IT OEMs Compared to USA / Japan Big Brands for IT 380

Conclusion Part V 390

Conclusion to Dissertation 395

Notes 421

5 New Contributions of this Doctoral Dissertation

1. **72 New Interviews in Japan, Taiwan and China:** Interviews with corporate insiders, industry or university experts and government officials were conducted and used as direct references throughout this study. This allowed the author the chance to add completely new material and insights in order to verify facts and get a direct interview survey of the IT industry in Taiwan and Japan.

2. **16 New Case Studies that Utilize First Hand Original Data:** 16 completely new case studies using original sources from Chinese, Japanese and English publications. Japanese Company studies are not included because they are readily available in many languages but references to many Japanese studies are referenced and quoted often. Because OEM case studies are very hard to find for Taiwan Companies, This study puts together a new set of 16 studies including Studies 1-13 plus Studies A, B, and Section 1.5.

3. **Wide Use of Chinese, Japanese and English Sources:** After reading through hundreds of books and articles on this topic over the last 5 years, I have found few in English that take full use of Chinese and Japanese sources so I focused on including a full range of sources as a new contribution.

4. **New Type of Analysis:** This research contributes to the analytical richness of institutional approaches. As discussed earlier, the existing paradigms in explaining development and organizational strategies, the statist approach in particular, have been criticized due to their ambiguous explanation about the causal linkage between structure and outcomes such as economic performance. By analyzing the effects of structure upon institutional settings, and again by explaining how changed institutional settings affect the actions and reactions of the key actors in the state and society, this study sheds light on the causal relations between structure, individual behavior, and political economic outcomes.

5. **New Theoretical Contributions:** This study makes a few important contributions to the study of development. First of all, the existing literature deals with the state in East Asia either as a dominant actor (a leader) in economic management or a supporter (a follower) of the market factors. The uniform application of either the statist or the market-oriented approaches, that is, the dichotomization of the role of the state in development, is no longer appropriate in explaining development. The institutional settings in which the state and societal actors interact have been well established as developments proceed, and thereby they affect the behavior of core actors in the policy-making process rather differently. Thus those who intend to study development have to look at the complex interplay between the state and society under the changing institutional environment. The recent democratization that Taiwan and Japan have undergone is particularly important in this regard because it will change the ways that interests are represented in the two societies though the process may be gradual.
